RACC-FSC_v3.0.xlsx: FREQUENTLY ASKED QUESTIONS (FAQS)

Do fuel substitution measures that do not contain refrigerants still have to fill in the RACC worksheet?

Yes. Refrigerant-free devices still require an entry in the RACC before the FSC can be populated. The FSC will look to the RACC to learn the lifecycle refrigerant leakage emissions--even when they are zero. (Added 2024-04-26.)

Which file is to be attached to a fuel substitution measure package as its addendum?

The completed RACC-FSC_v3.0.xlsx workbook is the file to be uploaded to the eTRM for each fuel substitution measure. (Added 2024-04-26.)

Will a new device type need to be built for the Refrigerant Lifecycle Management measure package?

Probably not. Select the appropriate AC or HP equipment at which this AOE measure is to be installed and then customize the leakage rate for the measure case. (Added 2024-04-26.)

The link to download the PostgreSQL driver for ODBC connections to DEER from within Excel no longer works. Please provide a new one.

We recommend downloading the Version 10.23 file most appropriate for your computer from:
<https://www.enterprisedb.com/download-postgresql-binaries>.
